

***Power Maths* calculation policy**

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Addition and subtraction: Children first learn to connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with $15 - 3$ and $15 - 13$, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods.

In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.

Multiplication and division: Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division. They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.

Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.

Fractions: In Year 1, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole. In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.

Year 1

	Concrete	Pictorial	Abstract
<p>Year 1 Addition</p> <p>When adding numbers to 10 children can explore both aggregation and augmentation.</p> <p>Augmentation: counting on. (bar model, ten frames, bead string and number track.)</p> <p>Aggregation: combining two sets. (part whole, bar model, numicon, ten frames).</p>	<p>Counting and adding more Children add one more person or object to a group to find one more.</p>  <p><i>One more than 4 is 5.</i> Learn to link counting on with adding more than one.</p>  <p>3 more than 4 is 7</p> 	<p>Counting and adding more (augmentation) Children add one more cube or counter to a group to represent one more.</p>  <p><i>One more than 4 is 5.</i></p>	<p>Counting and adding more Use a number line to understand how to link counting on with finding one more.</p>  <p><i>One more than 6 is 7.</i> <i>7 is one more than 6.</i></p> <p>Learn to link counting on with adding more than one.</p>  <p>$5 + 3 = 8$</p>
	<p>Understanding part-part-whole relationship Sort people and objects into parts and understand the relationship with the whole.</p>  <p><i>The parts are 2 and 4.</i> <i>The whole is 6.</i></p>  <p>The parts are 4 and 3. The whole is 7.</p>	<p>Understanding part-part-whole relationship Children draw to represent the parts and understand the relationship with the whole.</p>  <p><i>The parts are 1 and 5.</i> <i>The whole is 6.</i></p>  <p>The parts are 4 and 3. The whole is 7.</p> 	<p>Understanding part-part-whole relationship Use a part-whole model to represent the numbers.</p>  <p>$6 + 4 = 10$</p> <p>$6 + 4 = 10$</p>

Knowing and finding number bonds within 10

Break apart a group and put back together to find and form number bonds.

$$3 + 4 = 7$$

$$6 = 2 + 4$$

$$4 + 3 = 7$$

Knowing and finding number bonds within 10

Use five and ten frames to represent key number bonds.

$$5 = 4 + 1$$

$$10 = 7 + 3$$

Knowing and finding number bonds within 10

Use a part-whole model alongside other representations to find number bonds. Make sure to include examples where one of the parts is zero.

a)

b)

$$4 + 0 = 4$$

$$3 + 1 = 4$$

	<p>Understanding teen numbers as a complete 10 and some more Complete a group of 10 objects and count more.</p>  <p><i>13 is 10 and 3 more.</i></p>	<p>Understanding teen numbers as a complete 10 and some more Use a ten frame to support understanding of a complete 10 for teen numbers.</p>  <p><i>13 is 10 and 3 more.</i></p>	<p>Understanding teen numbers as a complete 10 and some more.</p> <p><i>1 ten and 3 ones equal 13.</i> $10 + 3 = 13$</p>
	<p>Adding by counting on Children use knowledge of counting to 20 to find a total by counting on using people or objects.</p> 	<p>Adding by counting on Children use counters to support and represent their counting on strategy.</p> 	<p>Adding by counting on Children use number lines or number tracks to support their counting on strategy.</p>  <p>$7 + 5 = \square$</p>
	<p>Adding the 1s Children use bead strings to recognise how to add the 1s to find the total efficiently.</p>  <p>$2 + 3 = 5$ $12 + 3 = 15$</p>	<p>Adding the 1s Children represent calculations using ten frames to add a teen and 1s.</p>  <p>$2 + 3 = 5$ $12 + 3 = 15$</p>	<p>Adding the 1s Children recognise that a teen is made from a 10 and some 1s and use their knowledge of addition within 10 to work efficiently.</p> <p>$3 + 5 = 8$ So, $13 + 5 = 18$</p>

<p>When adding one- digit numbers that cross 10, it is important to highlight the importance of ten ones equalling one ten.</p>	<p>Bridging the 10 using number bonds Children use a bead string to complete a 10 and understand how this relates to the addition.</p>  <p><i>7 add 3 makes 10. So, 7 add 5 is 10 and 2 more.</i></p>  <p><i>Children can use straws to show 8 + 7 8 + 2 = 10 So 8 add 7 is ten and 5 more.</i></p>	<p>Bridging the 10 using number bonds Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to 10.</p> 	<p>Bridging the 10 using number bonds Use a part-whole model and a number line to support the calculation. Use concrete resources alongside number lines to support children in understanding how to partition their jumps.</p>  <p>$9 + 4 = 13$</p>
<p>Year 1 Subtraction</p> <p>Ten frames , number tracks, single bar models and bead strings support reduction (taking away)</p>	<p>Counting back and taking away Children arrange objects and remove to find how many are left.</p>  <p><i>1 less than 6 is 5. 6 subtract 1 is 5.</i></p>  <p><i>3 less than 7 is 4 7 subtract 3 is 4</i></p>	<p>Counting back and taking away Children draw and cross out or use counters to represent objects from a problem.</p>   <p>$9 - \square = \square$ There are <input type="text"/> children left.</p>  <p>$7 - ? = 3$</p> 	<p>Counting back and taking away Children count back to take away and use a number line or number track to support the method.</p>  <p>$8 - 3 = 6$</p>  <p>$7 - 4 = 3$</p>

<p>Part whole models, tens frames and numicon support partitioning.</p>	<p>Finding a missing part, given a whole and a part Children separate a whole into parts and understand how one part can be found by subtraction.</p>  <p>8 - 5 = 3 7 - 3 = 4</p>  <p>First Then Now</p> 	<p>Finding a missing part, given a whole and a part Children represent a whole and a part and understand how to find the missing part by subtraction.</p>  <p>$5 - 4 = \square$</p> <p>First Then Now</p> 	<p>Finding a missing part, given a whole and a part Children use a part-whole model to support the subtraction to find a missing part.</p>  <p>7 - 3 = ?</p> <p>Children develop an understanding of the relationship between addition and subtraction facts in a part whole model.</p>  <p> $\square - \square = \square$ $\square - \square = \square$ $\square + \square = \square$ $\square + \square = \square$ </p>
<p>Cubes and bar models with two bars support finding the difference.</p>	<p>Finding the difference Arrange two groups so that the difference between the groups can be worked out.</p>  <p>8 is 2 more than 6. 6 is 2 less than 8.</p> <p>The difference between 8 and 6 is 2.</p>  <p>7 is 4 more than 3. 3 is 4 less than 7. The difference between 7 and 3 is 4.</p>	<p>Finding the difference Represent objects using sketches or counters to support finding the difference.</p>  <p>$5 - 4 = 1$ The difference between 5 and 4 is 1.</p>  <p>$7 - 3 = 4$ The difference between 7 and 3 is 4.</p>	<p>Finding the difference Children understand 'find the difference' as subtraction.</p>  <p>$10 - 4 = 6$ The difference between 10 and 6 is 4.</p>

Subtraction within 20

Understand when and how to subtract 1s efficiently.

Use a bead string to subtract 1s efficiently.

$$5 - 3 = 2$$

$$15 - 3 = 12$$

14 is 1 ten and 4 ones.

$$14 - 6 = 8$$

Subtraction within 20

Understand when and how to subtract 1s efficiently.

$$5 - 3 = 2$$

$$15 - 3 = 12$$

Subtraction within 20

Understand how to use knowledge of bonds within 10 to subtract efficiently.

$$5 - 3 = 2$$

$$15 - 3 = 12$$

Subtracting 10s and 1s

For example: $18 - 12$

Subtract 12 by first subtracting the 10, then the remaining 2.

First subtract the 10, then take away 2.

First subtract the 10, then subtract 2.

Use counters within a tens frame to subtract.

Subtracting 10s and 1s

For example: $18 - 12$

Use ten frames to represent the efficient method of subtracting 12.

First subtract the 10, then subtract 2.

Subtracting 10s and 1s

Use a part-whole model to support the calculation.

$$19 - 14$$

$$19 - 10 = 9$$

$$9 - 4 = 5$$

So, $19 - 14 = 5$

	<p>Subtraction bridging 10 using number bonds For example: $12 - 7$</p> <p>Arrange objects into a 10 and some 1s, then decide on how to split the 7 into parts.</p>  <p><i>7 is 2 and 5, so I take away the 2 and then the 5.</i></p>	<p>Subtraction bridging 10 using number bonds Represent the use of bonds using ten frames.</p>  <p><i>For $13 - 5$, I take away 3 to make 10, then take away 2 to make 8.</i></p>	<p>Subtraction bridging 10 using number bonds Use a number line and a part-whole model to support the method.</p> <p>$13 - 5$</p> 
<p>Year 1 Multiplication</p> <p>In Y1 children use concrete and pictorial representations to solve problems. They are not expected to record multiplication formally.</p>	<p>Recognising and making equal groups Children arrange objects in equal and unequal groups and understand how to recognise whether they are equal.</p> <p>A  B  C </p> <p>Children can group manipulatives such as cubes, counters, teddy bears, cars etc.</p>	<p>Recognising and making equal groups Children draw and represent equal and unequal groups.</p> <p>A  B </p>	<p>Describe equal groups using words</p> <p><i>Three equal groups of 4. Four equal groups of 3.</i></p>
	<p>Finding the total of equal groups by counting in 2s, 5s and 10s</p>  <p>There are 5 pens in each pack ... 5...10...15...20...25...30...35...40...</p>	<p>Finding the total of equal groups by counting in 2s, 5s and 10s 100 squares and ten frames support counting in 2s, 5s and 10s.</p> 	<p>Finding the total of equal groups by counting in 2s, 5s and 10s Use a number line to support repeated addition through counting in 2s, 5s and 10s.</p> 

<p>Year 1 Division</p> <p>In Y1 children use concrete and pictorial representations to solve problems. They are not expected to record formally.</p>	<p>Grouping</p> <p>Learn to make equal groups from a whole and find how many equal groups of a certain size can be made.</p> <p>Sort a whole set people and objects into equal groups.</p>  <p><i>There are 10 children altogether. There are 2 in each group. There are 5 groups.</i></p> <p>Children can group manipulatives such as cubes, counters, teddy bears, cars etc</p>	<p>Grouping</p> <p>Represent a whole and work out how many equal groups. Children can draw the equal groups shared from the whole in their books.</p>  <p><i>There are 10 in total. There are 5 in each group. There are 2 groups.</i></p>	<p>Grouping</p> <p>Children may relate this to counting back in steps of 2, 5 or 10.</p> 
	<p>Sharing</p> <p>Share a set of objects into equal parts and work out how many are in each part.</p>  <p>Children can share manipulatives such as cubes, counters, teddy bears, cars etc</p>	<p>Sharing</p> <p>Sketch or draw to represent sharing into equal parts. This may be related to fractions.</p> 	<p>Sharing</p> <p><i>10 shared into 2 equal groups gives 5 in each group.</i></p>

Year 2

	Concrete	Pictorial	Abstract										
<p>Understanding 10s and 1s</p> <p>When adding one digit numbers that cross ten, it is important to highlight the importance of ten ones equalling ten.</p>	<p>Group objects into 10s and 1s.</p> <p>Bundle straws to understand unitising of 10s.</p>	<p>Understand 10s and 1s equipment, and link with visual representations on ten frames.</p>	<p>Represent numbers on a place value grid, using equipment or numerals.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <th>Tens</th> <th>Ones</th> </tr> <tr> <td></td> <td></td> </tr> <tr> <td>3</td> <td>2</td> </tr> <tr> <th>Tens</th> <th>Ones</th> </tr> <tr> <td>4</td> <td>3</td> </tr> </table>	Tens	Ones			3	2	Tens	Ones	4	3
Tens	Ones												
3	2												
Tens	Ones												
4	3												
<p>Adding 10s</p>	<p>Use known bonds and unitising to add 10s.</p> <p><i>I know that $4 + 3 = 7$. So, I know that 4 tens add 3 tens is 7 tens.</i></p> <p>Children can use dienes to see the relationship.</p>	<p>Use known bonds and unitising to add 10s.</p> <p><i>I know that $4 + 3 = 7$. So, I know that 4 tens add 3 tens is 7 tens.</i></p>	<p>Use known bonds and unitising to add 10s.</p> <p>$4 + 3 = \square$</p> <p>$4 + 3 = 7$ $4 \text{ tens} + 3 \text{ tens} = 7 \text{ tens}$ $40 + 30 = 70$</p>										

Adding a 1-digit number to a 2-digit number not bridging a 10

Encourage children to count on from the larger number.

Encourage children to apply knowledge of number bonds to count more efficiently eg if $8+5=13$ then $38+5=43$

Add the 1s to find the total. Use known bonds within 10.

*41 is 4 tens and 1 one.
41 add 6 ones is 4 tens and 7 ones.*

This can also be done in a place value grid using dienes.

Add the 1s.

*34 is 3 tens and 4 ones.
4 ones and 5 ones are 9 ones.
The total is 3 tens and 9 ones.*

Children can draw the dienes into their books.

Add the 1s.

Understand the link between counting on and using known number facts. Children should be encouraged to use known number bonds to improve efficiency and accuracy.

This can be represented horizontally or vertically.

$$34 + 5 = 39$$

or

T	O
3	4
+	5
—	9

The formal method to be used alongside concrete materials until children have a good understanding of regrouping.

<p>Adding a 1-digit number to a 2-digit number bridging 10</p> <p>When adding one digit numbers that cross ten, it is important to highlight the importance of ten ones equalling ten.</p>	<p>Complete a 10 using number bonds.</p>  <p><i>There are 4 tens and 5 ones. I need to add 7. I will use 5 to complete a 10, then add 2 more.</i></p> <p>Use counters on a tens frames or dienes.</p> 	<p>Complete a 10 using number bonds. Children can counters in their books.</p> 	<p>Complete a 10 using number bonds.</p>  <p>$7 = 5 + 2$ $45 + 5 + 2 = 52$</p>
<p>Adding a 1-digit number to a 2-digit number using exchange</p>	<p>Exchange 10 ones for 1 ten. Use dienes to exchange and regroup.</p> 	<p>Exchange 10 ones for 1 ten. Children can draw counters or dienes into their books.</p> 	<p>Exchange 10 ones for 1 ten. Formal method to be used alongside concrete resources until children are secure with exchanging and regrouping.</p> 

<p>Adding a multiple of 10 to a 2-digit number</p>	<p>Add the 10s and then recombine.</p>  <p>27 is 2 tens and 7 ones. 50 is 5 tens.</p> <p>There are 7 tens in total and 7 ones. So, 27 + 50 is 7 tens and 7 ones.</p> <p>Children can use dienes to add multiples of 10.</p> 	<p>Add the 10s and then recombine.</p>  <p>66 is 6 tens and 6 ones. 66 + 10 = 76</p> <p>A 100 square can support this understanding.</p> <table border="1" data-bbox="958 630 1196 869"> <tbody> <tr><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td></tr> <tr><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td><td>17</td><td>18</td><td>19</td><td>20</td></tr> <tr><td>21</td><td>22</td><td>23</td><td>24</td><td>25</td><td>26</td><td>27</td><td>28</td><td>29</td><td>30</td></tr> <tr><td>31</td><td>32</td><td>33</td><td>34</td><td>35</td><td>36</td><td>37</td><td>38</td><td>39</td><td>40</td></tr> <tr><td>41</td><td>42</td><td>43</td><td>44</td><td>45</td><td>46</td><td>47</td><td>48</td><td>49</td><td>50</td></tr> <tr><td>51</td><td>52</td><td>53</td><td>54</td><td>55</td><td>56</td><td>57</td><td>58</td><td>59</td><td>60</td></tr> <tr><td>61</td><td>62</td><td>63</td><td>64</td><td>65</td><td>66</td><td>67</td><td>68</td><td>69</td><td>70</td></tr> <tr><td>71</td><td>72</td><td>73</td><td>74</td><td>75</td><td>76</td><td>77</td><td>78</td><td>79</td><td>80</td></tr> <tr><td>81</td><td>82</td><td>83</td><td>84</td><td>85</td><td>86</td><td>87</td><td>88</td><td>89</td><td>90</td></tr> <tr><td>91</td><td>92</td><td>93</td><td>94</td><td>95</td><td>96</td><td>97</td><td>98</td><td>99</td><td>100</td></tr> </tbody> </table>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99	100	<p>Add the 10s and then recombine.</p> $37 + 20 = ?$ $30 + 20 = 50$ $50 + 7 = 57$ $37 + 20 = 57$

<p>Adding two 2-digit numbers with exchange</p>	<p>Add the 1s. Exchange 10 ones for a ten. Then add the 10s. Children practise physically exchanging ten ones for one ten.</p>  	<p>Children now draw the calculation in their books using arrows to show their exchanging and regrouping.</p>  	<p>Add the 1s. Exchange 10 ones for a ten. Then add the 10s.</p> $\begin{array}{r} \text{T} \quad \text{O} \\ 3 \quad 6 \\ + 2 \quad 9 \\ \hline \quad 5 \\ \\ \text{T} \quad \text{O} \\ 3 \quad 6 \\ + 2 \quad 9 \\ \hline 6 \quad 5 \\ \end{array}$ <p>Children use concrete resources alongside the formal method to secure understanding.</p>
<p>Year 2 Subtraction</p>			
<p>Subtracting multiples of 10</p>	<p>Use known number bonds and unitising to subtract multiples of 10.</p>  <p>8 subtract 6 is 2. So, 8 tens subtract 6 tens is 2 tens.</p>	<p>Use known number bonds and unitising to subtract multiples of 10.</p>  <p>$10 - 3 = 7$ So, 10 tens subtract 3 tens is 7 tens.</p>	<p>Use known number bonds and unitising to subtract multiples of 10.</p>  <p>7 tens subtract 5 tens is 2 tens. $70 - 50 = 20$</p>

<p>Subtracting a single-digit number</p>	<p>Subtract the 1s. This may be done in or out of a place value grid. Children use real life objects of dienes.</p>	<p>Subtract the 1s. This may be done in or out of a place value grid. Children can draw the dienes in their books and cross out the ones to subtract.</p>	<p>Subtract the 1s. Understand the link between counting back and subtracting the 1s using known bonds.</p> $\begin{array}{r} \text{T} \quad \text{O} \\ 3 \quad 9 \\ - \quad 3 \\ \hline 3 \quad 6 \end{array}$ $9 - 3 = 6$ $39 - 3 = 36$
<p>Subtracting a single-digit number bridging 10</p>	<p>Bridge 10 by using known bonds.</p> <p>$35 - 6$ <i>I took away 5 counters, then 1 more.</i></p>	<p>Bridge 10 by using known bonds.</p> <p>$35 - 6$ <i>First, I will subtract 5, then 1.</i></p>	<p>Bridge 10 by using known bonds.</p> <p>$24 - 6 = ?$ $24 - 4 - 2 = ?$</p>

Subtracting a single-digit number using exchange

Exchange 1 ten for 10 ones. This may be done in or out of a place value grid.

Children use the dienes to physically exchange one ten for ten ones.

Exchange 1 ten for 10 ones.

They can draw the dienes in their books to show their exchanging with crosses and arrows.

Exchange 1 ten for 10 ones.

$$25 - 7 = 18$$

Children to use concrete materials alongside the formal method.

<p>Subtracting a 2-digit number</p>	<p>Subtract by taking away.</p> <p>$61 - 18$ I took away 1 ten and 8 ones.</p>	<p>Subtract the 10s and the 1s.</p> <p>This can be represented on a 100 square.</p> <table border="1" data-bbox="958 320 1328 691"> <tr><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td></tr> <tr><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td><td>17</td><td>18</td><td>19</td><td>20</td></tr> <tr><td>21</td><td>22</td><td>23</td><td>24</td><td>25</td><td>26</td><td>27</td><td>28</td><td>29</td><td>30</td></tr> <tr><td>31</td><td>32</td><td>33</td><td>34</td><td>35</td><td>36</td><td>37</td><td>38</td><td>39</td><td>40</td></tr> <tr><td>41</td><td>42</td><td>43</td><td>44</td><td>45</td><td>46</td><td>47</td><td>48</td><td>49</td><td>50</td></tr> <tr><td>51</td><td>52</td><td>53</td><td>54</td><td>55</td><td>56</td><td>57</td><td>58</td><td>59</td><td>60</td></tr> <tr><td>61</td><td>62</td><td>63</td><td>64</td><td>65</td><td>66</td><td>67</td><td>68</td><td>69</td><td>70</td></tr> <tr><td>71</td><td>72</td><td>73</td><td>74</td><td>75</td><td>76</td><td>77</td><td>78</td><td>79</td><td>80</td></tr> <tr><td>81</td><td>82</td><td>83</td><td>84</td><td>85</td><td>86</td><td>87</td><td>88</td><td>89</td><td>90</td></tr> <tr><td>91</td><td>92</td><td>93</td><td>94</td><td>95</td><td>96</td><td>97</td><td>98</td><td>99</td><td>100</td></tr> </table>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99	100	<p>Subtract the 10s and the 1s.</p> <p>This can be represented on a number line.</p> <p>$64 - 41 = ?$</p> <p>$64 - 1 = 63$ $63 - 40 = 23$ $64 - 41 = 23$</p> <p>$46 - 20 = 26$ $26 - 5 = 21$ $46 - 25 = 21$</p>

Subtracting a 2-digit number with exchange

Children should be encouraged to use the formal method alongside dienes, PV counters or straws.

As numbers become larger straws become less efficient.

Exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s.

Exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s.

Children can draw this in their books and show their exchange with arrows and their subtraction by crossing out ones then tens.

Using column subtraction, exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s.

$$\begin{array}{r} \text{T} \text{ O} \\ 4 \ 5 \\ - 2 \ 7 \\ \hline \end{array}$$

$$\begin{array}{r} \text{T} \text{ O} \\ \cancel{3} \ 15 \\ - 2 \ 7 \\ \hline \end{array}$$

$$\begin{array}{r} \text{T} \text{ O} \\ \cancel{3} \ 15 \\ - 2 \ 7 \\ \hline 8 \end{array}$$

$$\begin{array}{r} \text{T} \text{ O} \\ \cancel{3} \ 15 \\ - 2 \ 7 \\ \hline 1 \ 8 \end{array}$$

Children use concrete materials alongside the formal method to secure understanding.

Year 2 Multiplication	In year 2 children are introduced to abstract multiplication symbol. x		
<p>Equal groups and repeated addition Children use concrete resources such as numicon, counters, cubes, and dienes to make equal groups.</p>	<p>Recognise equal groups and write as repeated addition and as multiplication. Children can group real life objects or concrete materials.</p>  <p>3 groups of 5 chairs 15 chairs altogether</p> 	<p>Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication. Children can draw groups of counters in their books.</p>  <p>3 groups of 5 15 in total</p>	<p>Use a number line and write as repeated addition and as multiplication.</p>  <p>$5 + 5 + 5 = 15$ $3 \times 5 = 15$</p>
<p>Using arrays to represent multiplication and support understanding</p>	<p>Understand the relationship between arrays, multiplication and repeated addition.</p>  <p>4 groups of 5 Children can use counters to represent arrays.</p>	<p>Understand the relationship between arrays, multiplication and repeated addition. Children can draw the array in their books.</p>  <p>4 groups of 5 ... 5 groups of 5</p>	<p>Understand the relationship between arrays, multiplication and repeated addition.</p>  <p>$5 \times 5 = 25$</p>

<p>Understanding commutativity</p> <p>Commutativity: When 2 numbers can be added or multiplied & the same answer will be found no matter what order they are in.</p>	<p>Use arrays to visualise commutativity. Children can form arrays with counters.</p>  <p>I have 6 groups of 2 or 2 groups of 6.</p> <p><i>I can see 6 groups of 3. I can see 3 groups of 6.</i></p>	<p>Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication.</p>  <p><i>This is 2 groups of 6 and also 6 groups of 2.</i></p>	<p>Use arrays to visualise commutativity.</p>  <p>$4 + 4 + 4 + 4 + 4 = 20$ $5 + 5 + 5 + 5 = 20$ $4 \times 5 = 20$ and $5 \times 4 = 20$</p>
<p>Learning x2, x5 and x10 table facts Children should look for patterns in the times tables using concrete resources.</p> <p>Patterns:</p> <p>2s: Children should notice how the number are even and there is a pattern in the ones.</p> <p>5s: Children should notice the pattern in the ones (5 , 0)</p>	<p>Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.</p>  <p>3 30 $3 \times 10 = 30$</p> <p><i>groups of 10 ... 10, 20, = 30</i></p> <p><i>Children can use a range of concrete resources to notice patterns in</i></p> <p>2s :</p> 	<p>Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.</p>  <p>$10 + 10 + 10 = 30$ $3 \times 10 = 30$</p>	<p>Understand how the times-tables increase and contain patterns.</p>

Highlight the odd, even pattern.

10s : Children should notice that the ones end in 0 and the tens increase by 1 each time.

5s:

10s:

Children can draw groups .

$$5 \times 10 = 50$$

$$6 \times 10 = 60$$

Year 2 Division	In year 2 children are introduced to the abstract symbol for division. \div		
<p>Sharing equally</p>	<p>Start with a whole and share into equal parts, one at a time.</p>  <p><i>12 shared equally between 2. They get 6 each.</i></p> <p>Start to understand how this also relates to grouping. To share equally between 3 people, take a group of 3 and give 1 to each person. Keep going until all the objects have been shared</p>  <p style="text-align: center;">15</p>  <p>They get 5  each.</p> <p><i>15 shared equally between 3. They get 5 each.</i></p>	<p>Represent the objects shared into equal parts using a bar model. Children can draw this into their books.</p>  <p><i>20 shared into 5 equal parts. There are 4 in each part.</i></p>	<p>Use a bar model to support understanding of the division symbol.</p>  <p style="text-align: center;">18</p> <p>$18 \div 2 = 9$</p>

<p>Grouping equally Grouping encourages children to count in multiples and links to repeated subtraction. Using concrete resources helps to show the link between multiplication and division.</p>	<p>Understand how to make equal groups from a whole.</p>  <p><i>8 divided into 4 equal groups. There are 2 in each group.</i></p> <p>Children can group concrete resources.</p>  <p>$20 \div 5 = 4$</p>	<p>Understand the relationship between grouping and the division statements.</p> <p>$12 \div 3 = 4$</p>  <p>$12 \div 4 = 3$</p>  <p>$12 \div 6 = 2$</p>  <p>$12 \div 2 = 6$</p> 	<p>Understand how to relate division by grouping to repeated subtraction.</p>  <p>There are 4 groups now.</p> <p><i>12 divided into groups of 3. $12 \div 3 = 4$</i></p> <p><i>There are 4 groups.</i></p>
<p>Using known times-tables to solve divisions</p>	<p>Understand the relationship between multiplication facts and division.</p>  <p><i>4 groups of 5 cars is 20 cars in total. 20 divided by 4 is 5.</i></p> <p><i>Children group cubes or objects.</i></p>	<p>Link equal grouping with repeated subtraction and known times-table facts to support division.</p>  <p><i>40 divided by 4 is 10.</i></p> <p>Use a bar model to support understanding of the link between times-table knowledge and division.</p> 	<p>Relate times-table knowledge directly to division.</p> <p>$1 \times 10 = 10$ $2 \times 10 = 20$ $3 \times 10 = 30$ $4 \times 10 = 40$ $5 \times 10 = 50$ $6 \times 10 = 60$ $7 \times 10 = 70$ $8 \times 10 = 80$</p> <div style="border: 1px solid orange; border-radius: 15px; padding: 10px; width: fit-content; margin: 10px auto;"> <p>I used the 10 times-table to help me. $3 \times 10 = 30$.</p> </div> <p><i>I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3.</i></p> <p>$3 \times 10 = 30$ so $30 \div 10 = 3$</p>

Lower KEY STAGE 2

In Years 3 and 4, children develop the basis of written methods by building their skills alongside a deep understanding of place value. They should use known addition/subtraction and multiplication/division facts to calculate efficiently and accurately, rather than relying on counting. Children use place value equipment to support their understanding, but not as a substitute for thinking.

Key language: partition, place value, tens, hundreds, thousands, column method, whole, part, equal groups, sharing, grouping, bar model

Addition and subtraction: In Year 3 especially, the column methods are built up gradually. Children will develop their understanding of how each stage of the calculation, including any exchanges, relates to place value. The example calculations chosen to introduce the stages of each method may often be more suited to a mental method. However, the examples and the progression of the steps have been chosen to help children develop their fluency in the process, alongside a deep understanding of the concepts and the numbers involved, so that they can apply these skills accurately and efficiently to later calculations. The class should be encouraged to compare mental and written methods for specific calculations, and children should be encouraged at every stage to make choices about which methods to apply.

In Year 4, the steps are shown without such fine detail, although children should continue to build their understanding with a secure basis in place value. In subtraction, children will need to develop their understanding of exchange as they may need to exchange across one or two columns. By the end of Year 4, children should have developed fluency in column methods alongside a deep understanding, which will allow them to progress confidently in upper Key Stage 2.

Multiplication and division: Children build a solid grounding in times-tables, understanding the multiplication and division facts in tandem. As such, they should be as confident knowing that 35 divided by 7 is 5 as knowing that 5 times 7 is 35. Children develop key skills to support multiplication methods: unitising, commutativity, and how to use partitioning effectively. Unitising allows children to use known facts to multiply and divide multiples of 10 and 100 efficiently. Commutativity gives children flexibility in applying known facts to calculations and problem solving. An understanding of partitioning allows children to extend their skills to multiplying and dividing 2- and 3-digit numbers by a single digit. Children develop column methods to support multiplications in these cases. For successful division, children will need to make choices about how to partition. For example, to divide 423 by 3, it is effective to partition 423 into 300, 120 and 3, as these can be divided by 3 using known facts. Children will also need to understand the concept of remainder, in terms of a given calculation and in terms of the context of the problem.

Fractions: Children develop the key concept of equivalent fractions, and link this with multiplying and dividing the numerators and denominators, as well as exploring the visual concept through fractions of shapes. Children learn how to find a fraction of an amount, and develop this with the aid of a bar model and other representations alongside.

In Year 3, children develop an understanding of how to add and subtract fractions with the same denominator and find complements to the whole. This is developed alongside an understanding of fractions as numbers, including fractions greater than 1. In Year 4, children begin to work with fractions greater than 1. Decimals are introduced, as tenths in Year 3 and then as hundredths in Year 4. Children develop an understanding of decimals in terms of the relationship with fractions, with dividing by 10 and 100, and also with place value.

Year 3

	Concrete	Pictorial	Abstract												
Year 3 Addition															
Understanding 100s	<p>Understand the cardinality of 100, and the link with 10 tens. Use cubes to place into groups of 10 tens.</p> <p>Children could use dienes to group 10 tens into 100.</p>	<p>Unitise 100 and count in steps of 100.</p>	<p>Represent steps of 100 on a number line and a number track and count up to 1,000 and back to 0.</p>												
Understanding place value to 1,000	<p>Unitise 100s, 10s and 1s to build 3-digit numbers using dienes or counters.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Hundreds</th> <th>Tens</th> <th>Ones</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">100 100</td> <td style="text-align: center;">10 10 10</td> <td style="text-align: center;">1 1 1</td> </tr> </tbody> </table>	Hundreds	Tens	Ones	100 100	10 10 10	1 1 1	<p>Use equipment to represent numbers to 1,000.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Hundreds</th> <th>Tens</th> <th>Ones</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">200</td> <td style="text-align: center;">40</td> <td style="text-align: center;">1</td> </tr> </tbody> </table> <p>Use a place value grid to support the structure of numbers to 1,000. Place value counters are used alongside other equipment. Children should understand how each counter represents a different unitised amount. They can draw the concrete materials to support their understanding.</p>	Hundreds	Tens	Ones	200	40	1	<p>Represent the parts of numbers to 1,000 using a part-whole model.</p> <p>$215 = 200 + 10 + 5$</p> <p>Recognise numbers to 1,000 represented on a number line, including those between intervals.</p>
Hundreds	Tens	Ones													
100 100	10 10 10	1 1 1													
Hundreds	Tens	Ones													
200	40	1													

<p>Adding 100s</p>	<p>Use known facts and unitising to add multiples of 100.</p>  <p>$3 + 2 = 5$ $3 \text{ hundreds} + 2 \text{ hundreds} = 5 \text{ hundreds}$ $300 + 200 = 500$</p>  <p>Children can physically use the dienes for support.</p>	<p>Use known facts and unitising to add multiples of 100. Children can draw the dienes for support.</p>  <p>$3 + 4 = 7$ $3 \text{ hundreds} + 4 \text{ hundreds} = 7 \text{ hundreds}$ $300 + 400 = 700$</p>	<p>Use known facts and unitising to add multiples of 100.</p> <p>Represent the addition on a number line.</p> <p>Use a part-whole model to support unitising.</p>  <p>$3 + 2 = 5$ $300 + 200 = 500$</p>												
<p>3-digit number + 1s, no exchange or bridging</p>	<p>Use number bonds to add the 1s.</p>  <p>$214 + 4 = ?$ Now there are $4 + 4$ ones in total. $4 + 4 = 8$ $214 + 4 = 218$</p> <p>Children can physically use the dienes to add ones.</p> 	<p>Use number bonds to add the 1s.</p> <table border="1" data-bbox="958 903 1397 1254"> <thead> <tr> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td>2</td> <td>4</td> <td>9</td> </tr> </tbody> </table> <p>$245 + 4$ $5 + 4 = 9$ $245 + 4 = 249$</p>	H	T	O							2	4	9	<p>Understand the link with counting on.</p> <p>$245 + 4$</p>  <p>Use number bonds to add the 1s and understand that this is more efficient and less prone to error.</p> <p>$245 + 4 = ?$</p> <p><i>I will add the 1s.</i> $5 + 4 = 9$ So, $245 + 4 = 249$</p>
H	T	O													
2	4	9													

3-digit number + 1s with exchange

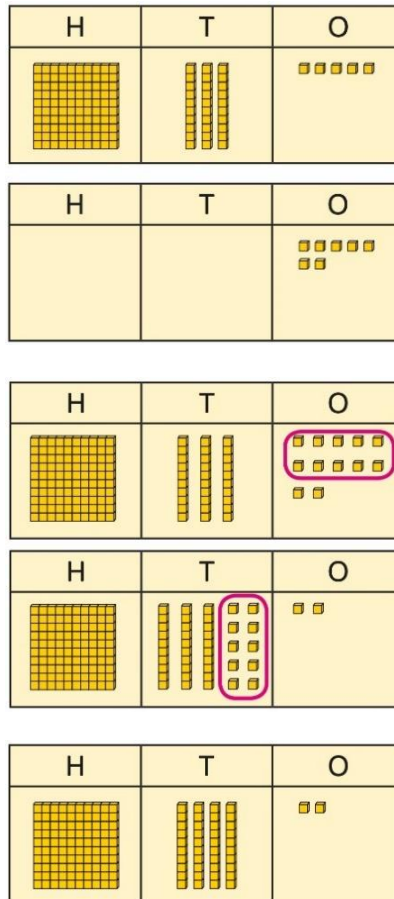

Understand that when the 1s sum to 10 or more, this requires an exchange of 10 ones for 1 ten.

Children should explore this using unitised objects or physical apparatus.

Children use the dienes to exchange ten ones for a ten and regroup.

Exchange 10 ones for 1 ten where needed. Use a place value grid to support the understanding.

$$135 + 7 = 142$$

Children can draw the visual representation and use arrows to show the exchange.

Understand how to bridge by partitioning to the 1s to make the next 10.

$$135 + 7 = ?$$

$$135 + 5 + 2 = 142$$

Ensure that children understand how to add 1s bridging a 100.

$$198 + 5 = ?$$

$$198 + 2 + 3 = 203$$

<p>3-digit number + 10s, no exchange</p>	<p>Calculate mentally by forming the number bond for the 10s.</p>  <p>Use dienes to add on tens.</p> $234 + 50$ <p>There are 3 tens and 5 tens altogether. $3 + 5 = 8$ In total there are 8 tens. $234 + 50 = 284$</p>	<p>Calculate mentally by forming the number bond for the 10s.</p> $351 + 30 = ?$  <p>5 tens + 3 tens = 8 tens $351 + 30 = 381$</p>	<p>Calculate mentally by forming the number bond for the 10s.</p> $753 + 40$ <p>I know that $5 + 4 = 9$</p> <p>So, $50 + 40 = 90$ $753 + 40 = 793$</p>
<p>3-digit number + 10s, with exchange</p>	<p>Understand the exchange of 10 tens for 1 hundred. $184 + 20 =$</p>  <p>Children use the dienes to exchange ten tens for a hundred and regroup.</p>	<p>Add by exchanging 10 tens for 1 hundred.</p> $184 + 20 = ?$  <p>Children can draw the dienes and use arrows to show the exchange,</p>	<p>Understand how the addition relates to counting on in 10s across 100.</p>  <p>$184 + 20 = ?$ I can count in 10s ... 194 ... 204 $184 + 20 = 204$</p> <p>Use number bonds within 20 to support efficient mental calculations. $385 + 50$ There are 8 tens and 5 tens. That is 13 tens. $385 + 50 = 300 + 130 + 5$ $385 + 50 = 435$</p>
<p>3-digit number + 2-digit number</p>	<p>Use place value equipment to make and combine groups to model addition.</p> $145 + 32 = 177$ 	<p>Use a place value grid to organise thinking and adding of 1s, then 10s.</p>	<p>Use the vertical column method to represent the addition. Children must understand how this relates to place value at each stage of the calculation.</p>

3-digit number + 2-digit number, exchange required

Dienes and place values are the most effective concrete materials when adding numbers with up to 3 digits.

Use place value equipment to model addition and understand where exchange is required.

Use place value counters to represent $154 + 72$.

Use this to decide if any exchange is required.

There are 5 tens and 7 tens. That is 12 tens so 1 will exchange.

Represent the required exchange on a place value grid using equipment. Children can draw the representation and show their exchange with arrows.

$$275 + 16 = ?$$

$$275 + 16 = 291$$

Note: In this example, a mental method may be more efficient. The numbers for the example calculation have been chosen to allow children to visualise the concept and see how the method relates to place value. Children should be encouraged at every stage to select methods that are accurate and efficient.

Use a column method with exchange. Children must understand how the method relates to place value at each stage of the calculation.

$$\begin{array}{r} \text{H T O} \\ 275 \\ + 16 \\ \hline \end{array}$$

$$\begin{array}{r} \text{H T O} \\ 275 \\ + 16 \\ \hline 91 \\ \hline \end{array}$$

$$\begin{array}{r} \text{H T O} \\ 275 \\ + 16 \\ \hline 291 \\ \hline \end{array}$$

$$275 + 16 = 291$$

Children use concrete materials alongside the column method until they are secure with exchanging.

3-digit number + 3-digit number, no exchange

Base 10./dienes and place value counters are the most effective manipulatives when adding with up to 3 digits.

Ensure children write the calculation alongside any concrete resource so they can see the links to the written column method.

Use place value equipment to make a representation of a calculation. This may or may not be structured in a place value grid.

326 + 541 is represented as:

Children add the ones first to support with the column method.

Represent the place value grid with equipment to model the stages of column addition.

Place value counters on a place value grid can be used to support learning. Ensure the children understand what each PV counter represents linking the PV counters to the base 10 equipment.

Children can draw the visual representation.

Use a column method to solve efficiently, using known bonds. Children must understand how this relates to place value at every stage of the calculation.

Children use concrete materials alongside the column method to secure understanding.

$$\begin{array}{r} \text{H T O} \\ + 326 \\ \underline{541} \\ 867 \end{array}$$

3-digit number + 3-digit number, exchange required

Use place value equipment to enact the exchange required.

$126 + 217 =$
 There are 13 ones.
 I will exchange ten ones for 1 ten.

I now have 3 hundreds, 4 tens and 3 ones.

Place value counters on a place value grid can be used to support learning. Ensure the children understand what each PV counter represents, linking the PV counters to the base 10 equipment.

Model the stages of column addition using place value equipment on a place value grid. Children can draw the dienes or PV counters in their books showing how they have exchanged ten ones for one ten and regrouped.

Use column addition, ensuring understanding of place value at every stage of the calculation.

$$\begin{array}{r} \text{H T O} \\ 126 \\ + 217 \\ \hline \end{array}$$

$$\begin{array}{r} \text{H T O} \\ 126 \\ + 217 \\ \hline 43 \end{array}$$

$$\begin{array}{r} \text{H T O} \\ 126 \\ + 217 \\ \hline 343 \end{array}$$

Children should concrete resources alongside the formal method until they are secure with exchanging and regrouping.

$126 + 217 = 343$

Note: Children should also study examples where exchange is required in more than one column, for example $185 + 318 = ?$

<p>Representing addition problems, and selecting appropriate methods</p>	<p>Encourage children to use their own drawings and choices of place value equipment to represent problems with one or more steps.</p> <p>These representations will help them to select appropriate methods.</p>	<p>Children understand and create bar models to represent addition problems.</p> <p>$275 + 99 = ?$</p>  <p>$275 + 99 = 374$</p>	<p>Use representations to support choices of appropriate methods.</p>  <p><i>I will add 100, then subtract 1 to find the solution.</i></p> <p>$128 + 105 + 83 = ?$ <i>I need to add three numbers.</i></p> <p>$128 + 105 = 233$</p>  
<p>Year 3 Subtraction</p>			
<p>Subtracting 100s</p>	<p>Use known facts and unitising to subtract multiples of 100.</p>  <p>$5 - 2 = 3$ $500 - 200 = 300$</p> <p>Children can use dienes to show visualise how this is 100 times bigger.</p>	<p>Use known facts and unitising to subtract multiples of 100.</p>  <p>$4 - 2 = 2$ $400 - 200 = 200$</p>	<p>Understand the link with counting back in 100s.</p>  <p>$400 - 200 = 200$</p> <p>Use known facts and unitising as efficient and accurate methods. <i>I know that $7 - 4 = 3$. Therefore, I know that $700 - 400 = 300$.</i></p>

<p>3-digit number - 1s, no exchange</p>	<p>Use number bonds to subtract the 1s. Children can use concrete objects.</p> <p>$214 - 3 = ?$</p> <p>$4 - 3 = 1$ $214 - 3 = 211$</p> <p>They use calculation mats and dienes to subtract ones.</p> <table border="1" data-bbox="353 1190 734 1409"> <thead> <tr> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td>3</td> <td>1</td> <td>4</td> </tr> </tbody> </table>	H	T	O				3	1	4	<p>Use number bonds to subtract the 1s.</p> <table border="1" data-bbox="958 520 1335 738"> <thead> <tr> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td>3</td> <td>1</td> <td>9</td> </tr> </tbody> </table> <p>$319 - 4 = ?$</p> <table border="1" data-bbox="958 847 1335 1066"> <thead> <tr> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td>3</td> <td>1</td> <td>9</td> </tr> </tbody> </table> <p>$9 - 4 = 5$ $319 - 4 = 315$</p> <p>Children can draw place value equipment into their books.</p>	H	T	O				3	1	9	H	T	O				3	1	9	<p>Understand the link with counting back using a number line.</p> <p>Use known number bonds to calculate mentally.</p> <p>$476 - 4 = ?$</p> <p>$6 - 4 = 2$ $476 - 4 = 472$</p>

<p>3-digit number – 1s, exchange or bridging required</p> <p>PV counters or dienes are the most effective concrete resource to use.</p>	<p>Understand why an exchange is necessary by exploring why 1 ten must be exchanged.</p> <p>Use place value equipment.</p> <p>$151 - 6 = ?$</p>  <p>Children use the dienes to exchange 1 ten or tens ones before subtracting the ones.</p>	<p>Represent the required exchange on a place value grid. Children can draw the place value equipment into their books and show the exchange using arrows.</p> <p>$151 - 6 = ?$</p> 	<p>Calculate mentally by using known bonds.</p> <p>$151 - 6 = ?$</p> <p>$151 - 1 - 5 = 145$</p>
<p>3-digit number – 10s, no exchange</p>	<p>Subtract the 10s using known bonds.</p>  <p>$381 - 10 = ?$</p> <p><i>8 tens with 1 removed is 7 tens.</i></p> <p>$381 - 10 = 371$</p> <p>Children could show this with PV counters or dienes.</p> 	<p>Subtract the 10s using known bonds.</p>  <p><i>8 tens – 1 ten = 7 tens</i></p> <p>$381 - 10 = 371$</p>	<p>Use known bonds to subtract the 10s mentally.</p> <p>$372 - 50 = ?$</p> <p>$70 - 50 = 20$</p> <p>So, $372 - 50 = 322$</p>

3-digit number – 10s, exchange or bridging required

Base 10 and PV counters on a PV grid are the most effective manipulative when subtracting numbers with up to 3 digits.

Ensure children are writing the calculation alongside any concrete resources so they can see the links to the written column method.

Use equipment to understand the exchange of 1 hundred for 10 tens.

Children use the dienes to exchange 1 hundred for 10 tens.

I need to exchange 1 hundred for 10 tens, to help subtract 2 tens.

Represent the exchange on a place value grid using equipment.

$210 - 20 = ?$

I need to exchange 1 hundred for 10 tens, to help subtract 2 tens.

$210 - 20 = 190$

PV counters can also be used to represent the calculation once the children are aware of what ten/ hundred looks like. Ensure the children understand what each PV counter represents.

Understand the link with counting back on a number line.

Use flexible partitioning to support the calculation.

$235 - 60 = ?$

$$235 = 100 + 130 + 5$$

$$235 - 60 = 100 + 70 + 5$$

$$= 175$$

3-digit number – up to 3-digit number

Children should use the expanded column method before moving onto the short method. This ensures they are secure in their understanding of the place value.

Children subtract the ones first to support with the column method.

Use place value equipment to explore the effect of splitting a whole into two parts, and understand the link with taking away.

Children practise making 3 digit numbers with dienes and subtracting ones, tens and hundreds.

Represent the calculation on a place value grid.

PV counters can also be used to represent the calculation once the children are aware of what ten/ hundred looks like. Ensure the children understand what each PV counter represents.

Use column subtraction to calculate accurately and efficiently. Expanded method should be explored first. This helps children to understand that they are subtracting ones, tens and hundreds.

$$\begin{array}{r}
 - 900 \ 90 \ 9 \\
 \underline{300 \ 50 \ 2} \\
 600 \ 40 \ 7
 \end{array}$$

Children then move on to the short method.

3-digit number – up to 3-digit number, exchange required

Children should use the expanded column method before moving onto the short method to ensure they are secure in their understanding of the place value.

Children subtract the ones first to support with column method.

Use equipment to enact the exchange of 1 hundred for 10 tens, and 1 ten for 10 ones.

Children use the dienes to 1 ten for 10 ones before subtracting the ones.

Model the required exchange on a place value grid.

$$175 - 38 = ?$$

I need to subtract 8 ones, so I will exchange a ten for 10 ones.

PV counters can also be used to represent the calculation once the children are aware of what ten/ hundred looks like. Ensure the children understand what each PV counter represents.

Children can draw the visual representation in books to show their exchanges.

Use column subtraction to work accurately and efficiently.

$$\begin{array}{r} \text{H T O} \\ 175 \\ - 38 \\ \hline 137 \end{array}$$

$$175 - 38 = 137$$

If the subtraction is a 3-digit number subtract a 2-digit number, children should understand how the recording relates to the place value, and so how to line up the digits correctly.

Children should also understand how to exchange in calculations where there is a zero in the 10s column. Children can use expanded method to support understanding

$$\begin{array}{r} -500 \quad 00 \quad 6 \\ 300 \quad 20 \quad 8 \\ \hline \end{array}$$

<p>Representing subtraction problems</p>	<p>Encourage children to use their own drawings and choices of place value equipment to represent problems with one or more steps.</p> <p>These representations will help them to select appropriate methods.</p>	<p>Use bar models to represent subtractions.</p> <p>'Find the difference' is represented as two bars for comparison.</p> <p>Team A </p> <p>Team B </p> <p>Bar models can also be used to show that a part must be taken away from the whole.</p>	<p>Children use alternative representations to check calculations and choose efficient methods.</p> <p>Children use inverse operations to check additions and subtractions. The part-whole model supports understanding.</p> <p><i>I have completed this subtraction.</i> $525 - 270 = 255$ <i>I will check using addition.</i></p>  <table border="0" data-bbox="1556 746 1682 863"> <tr><td></td><td>H</td><td>T</td><td>O</td></tr> <tr><td></td><td>2</td><td>7</td><td>0</td></tr> <tr><td>+</td><td>2</td><td>5</td><td>5</td></tr> <tr><td></td><td>5</td><td>2</td><td>5</td></tr> <tr><td></td><td></td><td></td><td>1</td></tr> </table>		H	T	O		2	7	0	+	2	5	5		5	2	5				1

<p>Year 3 Multiplication</p>																							
<p>Understanding equal grouping and repeated addition</p> <p>Ensure that children understand the word 'grouping.'</p> <p>Commutative: The answer is does not depend on the</p>	<p>Children continue to build understanding of equal groups and the relationship with repeated addition. They recognise both examples and non-examples using objects.</p>  <p>Children recognise that arrays can be used to model commutative multiplications.</p>	<p>Children recognise that arrays demonstrate commutativity.</p>  <p><i>This is 3 groups of 4.</i> <i>This is 4 groups of 3.</i></p>	<p>Children understand the link between repeated addition and multiplication.</p>  <p><i>8 groups of 3 is 24.</i></p> <p>$3 + 3 + 3 + 3 + 3 + 3 + 3 + 3 = 24$ $8 \times 3 = 24$</p> <p>A bar model may represent multiplications as equal groups.</p>																				

<p>order of the operations eg. $4 \times 3 = 12$ $3 \times 4 = 12$</p>	 <p><i>I can see 3 groups of 8. I can see 8 groups of 3.</i></p>  <p><i>I can see 3 groups of 4. I can see 4 groups of 3.</i></p>  <p>Children can use counters or cubes to represent arrays.</p>	<p>Children can draw arrays into their books and group them to show commutativity.</p>	 <p>$6 \times 4 = 24$</p>
<p>Using commutativity to support understanding of the times-tables</p>	<p>Understand how to use times-tables facts flexibly.</p>   <p><i>There are 6 groups of 4 pens. There are 4 groups of 6 bread rolls. I can use $6 \times 4 = 24$ to work out both totals.</i></p>  <p>Children can use counters, cubes or objects to represent groups.</p>	<p>Understand how times-table facts relate to commutativity.</p>  <p>$6 \times 4 = 24$ $4 \times 6 = 24$</p> <p>Children can draw groups or arrays into their books.</p>	<p>Understand how times-table facts relate to commutativity.</p> <p><i>I need to work out 4 groups of 7. I know that $7 \times 4 = 28$ so, I know that 4 groups of 7 = 28 and 7 groups of 4 = 28.</i></p>

<p>Understanding and using $\times 3$, $\times 2$, $\times 4$ and $\times 8$ tables.</p> <p>Encourage children to make links between \times and \div.</p>	<p>Children learn the times-tables as 'groups of', but apply their knowledge of commutativity.</p>  <p><i>I can use the $\times 3$ table to work out how many keys.</i> <i>I can also use the $\times 3$ table to work out how many batteries.</i></p> <p>Children can use cubes or counters to show the groups.</p>  <p>$3 \times 2 = 6$ $3 \times 4 = 12$ $3 \times 8 = 24$</p>	<p>Children understand how the $\times 2$, $\times 4$ and $\times 8$ tables are related through repeated doubling.</p>  <p>$3 \times 2 = 6$ $3 \times 4 = 12$ $3 \times 8 = 24$</p>	<p>Children understand the relationship between related multiplication and division facts in known times-tables.</p>  <p>$2 \times 5 = 10$ $5 \times 2 = 10$ $10 \div 5 = 2$ $10 \div 2 = 5$</p>
<p>Using known facts to multiply 10s, for example 3×40</p>	<p>Explore the relationship between known times-tables and multiples of 10 using place value equipment.</p> <p><i>Make 4 groups of 3 ones.</i></p>  <p><i>Make 4 groups of 3 tens.</i></p>  <p><i>What is the same?</i> <i>What is different?</i> Can also be shown with PV counters.</p>	<p>Understand how unitising 10s supports multiplying by multiples of 10.</p>  <p><i>4 groups of 2 ones is 8 ones.</i> <i>4 groups of 2 tens is 8 tens.</i></p> <p>$4 \times 2 = 8$ $4 \times 20 = 80$</p>	<p>Understand how to use known times-tables to multiply multiples of 10.</p>  <p>$4 \times 2 = 8$ $4 \times 20 = 80$</p>

Multiplying a 2-digit number by a 1-digit number

Children should use the expanded column method before moving onto the short method in year 4.

Place Value counters should be used to support the understanding of the method rather than supporting the multiplication.

Multiplication grids to be used if necessary.

Understand how to link partitioning a 2-digit number with multiplying.

Each person has 23 flowers.

Each person has 2 tens and 3 ones.

There are 3 groups of 2 tens.

There are 3 groups of 3 ones.

Use place value equipment to model the multiplication context.

	T	O

There are 3 groups of 3 ones.

There are 3 groups of 2 tens.

Use place value to support how partitioning is linked with multiplying by a 2-digit number.

$$3 \times 24 = ?$$

T	O

$$3 \times 4 = 12$$

T	O

$$3 \times 20 = 60$$

$$60 + 12 = 72$$

$$3 \times 24 = 72$$

Use partitioning and addition to complete multiplications of 2-digit numbers by a 1-digit number.

$$4 \times 13 = ?$$

$$4 \times 3 = 12$$

$$4 \times 10 = 40$$

$$12 + 40 = 52$$

$$4 \times 13 = 52$$

×	20	2
1	20	2

Multiplying a 2-digit number by a 1-digit number, expanded column method

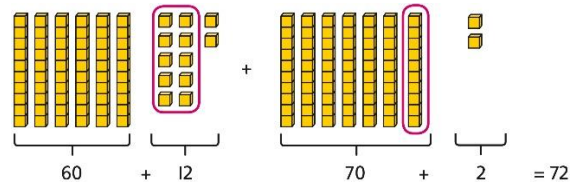

Children should use the expanded column method before moving onto the short method in year 4.

Use place value equipment to model how 10 ones are exchanged for a 10 in some multiplications.

$$3 \times 24 = ?$$

$$3 \times 20 = 60$$

$$3 \times 4 = 12$$

$$3 \times 24 = 60 + 12$$

$$3 \times 24 = 70 + 2$$

$$3 \times 24 = 72$$

Understand that multiplications may require an exchange of 1s for 10s, and also 10s for 100s. Children can represent this in their books.

$$4 \times 23 = ?$$

$$4 \times 23 = 92$$

$$5 \times 23 = ?$$

$$5 \times 3 = 15$$

$$5 \times 20 = 100$$

$$5 \times 23 = 115$$

Children may write calculations in expanded column form, but must understand the link with place value and exchange.

Children are encouraged to write the expanded parts of the calculation separately.

$$5 \times 28 = ?$$

Year 3 Division			
<p>Using times-tables knowledge to divide</p> <p>Ensure that children understand the term 'grouping.'</p>	<p>Use knowledge of known times-tables to calculate divisions.</p>  <p><i>24 divided into groups of 8. There are 3 groups of 8.</i></p> <p>Children can group cubes or counters to support.</p>  <p>$48 \div 4 = 12$</p>	<p>Use knowledge of known times-tables to calculate divisions.</p>  <p>$48 \div 4 = 12$</p> <p><i>48 divided into groups of 4. There are 12 groups.</i></p> <p>$4 \times 12 = 48$ $48 \div 4 = 12$</p>	<p>Use knowledge of known times-tables to calculate divisions.</p> <p><i>I need to work out 30 shared between 5.</i></p> <p><i>I know that $6 \times 5 = 30$ so I know that $30 \div 5 = 6$.</i></p> <p>A bar model may represent the relationship between sharing and grouping.</p>  <p>$24 \div 4 = 6$ $24 \div 6 = 4$</p> <p>Children understand how division is related to both repeated subtraction and repeated addition.</p>  <p>$24 \div 8 = 3$</p>  <p>$32 \div 8 = 4$</p>

<p>Understanding remainders</p>	<p>Use equipment to understand that a remainder occurs when a set of objects cannot be divided equally any further.</p>  <p>There are 13 sticks in total. There are 3 groups of 4, with 1 remainder. Children can share cubes or counters.</p> 	<p>Use images to explain remainders.</p>  <p>$22 \div 5 = 4 \text{ remainder } 2$</p>	<p>Understand that the remainder is what cannot be shared equally from a set.</p> <p>$22 \div 5 = ?$</p> <p>$3 \times 5 = 15$ $4 \times 5 = 20$ $5 \times 5 = 25 \dots \text{this is larger than } 22$ So, $22 \div 5 = 4 \text{ remainder } 2$</p>
<p>Using known facts to divide multiples of 10</p> <p>Unitising: treating groups that contain or represent the same number of things as one unit.</p>	<p>Use place value equipment to understand how to divide by unitising.</p> <p>Make 6 ones divided by 3.</p>  <p>Now make 6 tens divided by 3.</p>  <p>What is the same? What is different?</p>	<p>Divide multiples of 10 by unitising.</p>  <p>12 tens shared into 3 equal groups. 4 tens in each group.</p>	<p>Divide multiples of 10 by a single digit using known times-tables.</p> <p>$180 \div 3 = ?$</p> <p>180 is 18 tens. 18 divided by 3 is 6. 18 tens divided by 3 is 6 tens.</p> <p>$18 \div 3 = 6$ $180 \div 3 = 60$</p>
<p>2-digit number divided by 1-digit number, no remainders</p>	<p>Children explore dividing 2-digit numbers by using place value equipment.</p> 	<p>Children explore which partitions support particular divisions.</p>	<p>Children partition a number into 10s and 1s to divide where appropriate.</p>  <p>$60 \div 2 = 30$</p>

	<p>$48 \div 2 = ?$</p> <p>First divide the 10s.</p>  <p>Then divide the 1s.</p> 	 <p><i>I need to partition 42 differently to divide by 3.</i></p>  <p>$42 = 30 + 12$</p> <p>$42 \div 3 = 14$</p> <p>Children draw part wholes to support.</p>	<p>$8 \div 2 = 4$ $30 + 4 = 34$ $68 \div 2 = 34$</p> <p>Children partition flexibly to divide where appropriate.</p> <p>$42 \div 3 = ?$ $42 = 40 + 2$</p> <p><i>I need to partition 42 differently to divide by 3.</i></p> <p>$42 = 30 + 12$</p> <p>$30 \div 3 = 10$ $12 \div 3 = 4$</p> <p>$10 + 4 = 14$ $42 \div 3 = 14$</p>
<p>2-digit number divided by 1-digit number, with remainders</p>	<p>Use place value equipment to understand the concept of remainder. <i>Make 29 from place value equipment. Share it into 2 equal groups.</i></p>  <p><i>There are two groups of 14 and 1 remainder.</i></p>	<p>Use place value equipment to understand the concept of remainder in division. Children should start with the equipment outside of the PV grid to highlight remainders.</p> <p>$29 \div 2 = ?$</p>  <p>$29 \div 2 = 14 \text{ remainder}$</p>	<p>Partition to divide, understanding the remainder in context. <i>67 children try to make 5 equal lines.</i></p> <p>$67 = 50 + 17$ $50 \div 5 = 10$</p> <p>$17 \div 5 = 3 \text{ remainder } 2$ $67 \div 5 = 13 \text{ remainder } 2$</p> <p><i>There are 13 children in each line and 2 children left out.</i></p>

Year 4

	Concrete	Pictorial	Abstract												
Year 4 Addition															
Understanding numbers to 10,000	<p>Use place value equipment to understand the place value of 4-digit numbers.</p>  <p>4 thousands equal 4,000.</p> <p>1 thousand is 10 hundreds.</p>	<p>Represent numbers using place value counters once children understand the relationship between 1,000s and 100s.</p>  <p>$2,000 + 500 + 40 + 2 = 2,542$</p>	<p>Understand partitioning of 4-digit numbers, including numbers with digits of 0.</p>  <p>$5,000 + 60 + 8 = 5,068$</p> <p>Understand and read 4-digit numbers on a number line.</p> 												
Choosing mental methods where appropriate	<p>Use unitising and known facts to support mental calculations.</p> <p>Make 1,405 from place value equipment.</p> <p>Add 2,000.</p> <p>Now add the 1,000s.</p> <p>1 thousand + 2 thousands = 3 thousands</p> <p>$1,405 + 2,000 = 3,405$</p>	<p>Use unitising and known facts to support mental calculations.</p> <table border="1" data-bbox="952 1021 1512 1189"> <thead> <tr> <th>Th</th> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table> <p>I can add the 100s mentally.</p> <p>$200 + 300 = 500$</p> <p>So, $4,256 + 300 = 4,556$</p>	Th	H	T	O									<p>Use unitising and known facts to support mental calculations.</p> <p>$4,256 + 300 = ?$</p> <p>$2 + 3 = 5$ $200 + 300 = 500$</p> <p>$4,256 + 300 = 4,556$</p>
Th	H	T	O												

Column addition with exchange

Children should use the expanded column method before moving onto the short method to ensure they are aware of the place value.

Use place value equipment on a place value grid to organise thinking.

Ensure that children understand how the columns relate to place value and what to do if the numbers are not all 4-digit numbers.

Use equipment to show $1,905 + 775$.

Th	H	T	O
1000	900 900 900 900		50 50 50 50
1000 1000 1000 1000	700 700	70 70 70 70 70 70	50 50 50 50

Why have only three columns been used for the second row? Why is the Thousands box empty?

Which columns will total 10 or more?

Use place value equipment to model required exchanges.

Year 4 Multiplication			
<p>Multiplying by multiples of 10 and 100</p> <p>Unitising: treating groups that contain or represent the same number of things as one unit.</p>	<p>Use unitising and place value equipment to understand how to multiply by multiples of 1, 10 and 100.</p>  <p>3 groups of 4 ones is 12 ones. 3 groups of 4 tens is 12 tens. 3 groups of 4 hundreds is 12 hundreds.</p>	<p>Use unitising and place value equipment to understand how to multiply by multiples of 1, 10 and 100.</p>  <p>$3 \times 4 = 12$ $3 \times 40 = 120$ $3 \times 400 = 1,200$</p>	<p>Use known facts and understanding of place value and commutativity to multiply mentally.</p> <p>$4 \times 7 = 28$</p> <p>$4 \times 70 = 280$ $40 \times 7 = 280$</p> <p>$4 \times 700 = 2,800$ $400 \times 7 = 2,800$</p>
<p>Understanding times-tables up to 12×12</p>	<p>Understand the special cases of multiplying by 1 and 0.</p>  <p>$5 \times 1 = 5$ $5 \times 0 = 0$</p> <p>Children can use cubes or counters.</p>	<p>Represent the relationship between the $\times 9$ table and the $\times 10$ table.</p>  <p>Represent the $\times 11$ table and $\times 12$ tables in relation to the $\times 10$ table.</p>  <p>$2 \times 11 = 20 + 2$ $3 \times 11 = 30 + 3$ $4 \times 11 = 40 + 4$</p>  <p>$4 \times 12 = 40 + 8$</p>	<p>Understand how times-tables relate to counting patterns.</p> <p>Understand links between the $\times 3$ table, $\times 6$ table and $\times 9$ table 5×6 is double 5×3</p> <p>$\times 5$ table and $\times 6$ table <i>I know that $7 \times 5 = 35$ so I know that $7 \times 6 = 35 + 7$.</i></p> <p>$\times 5$ table and $\times 7$ table $3 \times 7 = 3 \times 5 + 3 \times 2$</p>  <p>$\times 9$ table and $\times 10$ table $6 \times 10 = 60$ $6 \times 9 = 60 - 6$</p>

<p>Understanding and using partitioning in multiplication</p>	<p>Make multiplications by partitioning.</p> <p>4×12 is 4 groups of 10 and 4 groups of 2.</p>  <p>$4 \times 12 = 40 + 8$</p>	<p>Understand how multiplication and partitioning are related through addition.</p>  <p>$4 \times 3 = 12$ $4 \times 5 = 20$ $4 \times 3 = 12$ $4 \times 5 = 20$ $12 + 20 = 32$</p> <p>$4 \times 8 = 32$</p>	<p>Use partitioning to multiply 2-digit numbers by a single digit.</p> <p>$18 \times 6 = ?$</p>  <p>$18 \times 6 = 10 \times 6 + 8 \times 6$ $= 60 + 48$ $= 108$</p> <p>$18 \times 6 = 10 \times 6 + 8 \times 6$ $= 60 + 48$ $= 108$</p>
<p>Column multiplication for 2- and 3-digit numbers multiplied by a single digit</p> <p>Children should use expanded column method before moving onto short method. Place Value counters should be used to support the understanding of the method rather than supporting the multiplication. Multiplication grids to be used if necessary.</p>	<p>Use place value equipment to make multiplications.</p> <p>Make 4×136 using equipment.</p>  <p>I can work out how many 1s, 10s and 100s.</p> <p>There are 4×6 ones... 24 ones There are 4×3 tens ... 12 tens There are 4×1 hundreds ... 4 hundreds</p> <p>$24 + 120 + 400 = 544$</p>	<p>Use place value equipment alongside a column method for multiplication of up to 3-digit numbers by a single digit.</p>  <p>$312 \times 3 = 936$</p>	<p>Use the formal column method for up to 3-digit numbers multiplied by a single digit.</p>  <p>Understand how the expanded column method is related to the formal column method and understand how any exchanges are related to place value at each stage of the calculation.</p> 

<p>Multiplying more than two numbers</p>	<p>Represent situations by multiplying three numbers together.</p>  <p>Each sheet has 2×5 stickers. There are 3 sheets. There are $5 \times 2 \times 3$ stickers in total.</p> $5 \times 2 \times 3 = 30$ <p>Children can use counters eg they can show 10 lots of 2×6.</p> 	<p>Understand that commutativity can be used to multiply in different orders.</p>  $2 \times 6 \times 10 = 120$ $12 \times 10 = 120$ $10 \times 6 \times 2 = 120$ $60 \times 2 = 120$	<p>Use knowledge of factors to simplify some multiplications.</p> $24 \times 5 = 12 \times 2 \times 5$ $12 \times 2 \times 5 =$ $12 \times 10 = 120$ <p>So, $24 \times 5 = 120$</p>
<p>Year 4 Division</p>			
<p>Understanding the relationship between multiplication and division, including times-tables</p>	<p>Use objects to explore families of multiplication and division facts.</p>  $4 \times 6 = 24$ <p>24 is 6 groups of 4. 24 is 4 groups of 6. 24 divided by 6 is 4. 24 divided by 4 is 6.</p>	<p>Represent divisions using an array.</p>  $28 \div 7 = 4$	<p>Understand families of related multiplication and division facts.</p> <p>I know that $5 \times 7 = 35$ so I know all these facts:</p> $5 \times 7 = 35$ $7 \times 5 = 35$ $35 = 5 \times 7$ $35 = 7 \times 5$ $35 \div 5 = 7$ $35 \div 7 = 5$ $7 = 35 \div 5$ $5 = 35 \div 7$

<p>Dividing multiples of 10 and 100 by a single digit</p>	<p>Use place value equipment to understand how to use unitising to divide.</p>  <p>8 ones divided into 2 equal groups 4 ones in each group</p> <p>8 tens divided into 2 equal groups 4 tens in each group</p> <p>8 hundreds divided into 2 equal groups 4 hundreds in each group</p>	<p>Represent divisions using place value equipment.</p> <p>$9 \div 3 = \square$</p>  <p>$90 \div 3 = \square$</p>  <p>$900 \div 3 = \square$</p>  <p>$9 \div 3 = 3$</p> <p>9 tens divided by 3 is 3 tens. 9 hundreds divided by 3 is 3 hundreds.</p>	<p>Use known facts to divide 10s and 100s by a single digit.</p> <p>$15 \div 3 = 5$</p> <p>$150 \div 3 = 50$</p> <p>$1500 \div 3 = 500$</p>
<p>Dividing 2-digit and 3-digit numbers by a single digit by partitioning into 100s, 10s and 1s</p>	<p>Partition into 10s and 1s to divide where appropriate.</p> <p>$39 \div 3 = ?$</p>  <p>$3 \times 10 = 30$ $3 \times 3 = 9$</p> <p>$39 = 30 + 9$</p> <p>$30 \div 3 = 10$</p> <p>$9 \div 3 = 3$</p> <p>$39 \div 3 = 13$</p> <p>3 groups of 1 ten 3 groups of 3 ones</p>	<p>Partition into 100s, 10s and 1s using Base 10 equipment to divide where appropriate.</p> <p>$39 \div 3 = ?$</p>  <p>3 groups of 1 ten 3 groups of 3 ones</p> <p>$39 = 30 + 9$</p> <p>$30 \div 3 = 10$</p> <p>$9 \div 3 = 3$</p> <p>$39 \div 3 = 13$</p>	<p>Partition into 100s, 10s and 1s using a part-whole model to divide where appropriate.</p> <p>$142 \div 2 = ?$</p>  <p>$100 \div 2 = \square$ $40 \div 2 = \square$ $6 \div 2 = \square$</p> <p>$100 \div 2 = 50$</p> <p>$40 \div 2 = 20$</p> <p>$6 \div 2 = 3$</p> <p>$50 + 20 + 3 = 73$</p> <p>$142 \div 2 = 73$</p>

<p>Dividing 2-digit and 3-digit numbers by a single digit, using flexible partitioning</p>	<p>Use place value equipment to explore why different partitions are needed.</p> <p>$42 \div 3 = ?$</p> <p><i>I will split it into 30 and 12, so that I can divide by 3 more easily.</i></p> 	<p>Represent how to partition flexibly where needed.</p> <p>$84 \div 7 = ?$</p> <p><i>I will partition into 70 and 14 because I am dividing by 7.</i></p>  <p>$84 \div 7 = 12$</p>	<p>Make decisions about appropriate partitioning based on the division required.</p>  <p>Understand that different partitions can be used to complete the same division.</p> 
<p>Understanding remainders</p>	<p>Use place value equipment to find remainders.</p> <p><i>85 shared into 4 equal groups</i></p> <p><i>There are 24, and 1 that cannot be shared.</i></p> 	<p>Represent the remainder as the part that cannot be shared equally.</p>  <p>$72 \div 5 = 14 \text{ remainder } 2$</p>	<p>Understand how partitioning can reveal remainders of divisions.</p>  <p>$80 \div 4 = 20$ $12 \div 4 = 3$</p> <p>$95 \div 4 = 23 \text{ remainder } 3$</p>

Upper KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.
Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.
Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen.

Multiplication and division: Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.
Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.
Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.
Multiplication and division of decimals are also introduced and refined in Year 6.

Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them.
Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.
Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

Year 5

	Concrete	Pictorial	Abstract																																																																												
Year 5 Addition																																																																															
<p>Column addition with whole numbers</p> <p>PV counters or plain counters on a PV grid are the most effective concrete resources when adding with more than 4 digits.</p> <p>At this stage, children should be encouraged to work in the abstract, using the column method to add larger numbers efficiently.</p>	<p>Use place value equipment to represent additions.</p> <p><i>Add a row of counters onto the place value grid to show $15,735 + 4,012$.</i></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>TTh</th> <th>Th</th> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td>●</td> <td>●●●●●</td> <td>●●●●●</td> <td>●●●●●</td> <td>●●●●●</td> </tr> <tr> <td></td> <td></td> <td>●●</td> <td></td> <td></td> </tr> </tbody> </table>	TTh	Th	H	T	O	●	●●●●●	●●●●●	●●●●●	●●●●●			●●			<p>Represent additions, using place value equipment on a place value grid alongside written methods.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>TTh</th> <th>Th</th> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td>●●</td> <td></td> <td>●</td> <td>●●●●●</td> <td>●●●</td> </tr> <tr> <td>●●</td> <td>●●●●●</td> <td>●</td> <td>●●●●●</td> <td>●●●●●</td> </tr> </tbody> </table> <p><i>I need to exchange 10 tens for a 100.</i></p> <table style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>TTh</th> <th>Th</th> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td>2</td> <td>0</td> <td>1</td> <td>5</td> <td>3</td> </tr> <tr> <td>+</td> <td>1</td> <td>9</td> <td>1</td> <td>7</td> <td>5</td> </tr> <tr> <td></td> <td>3</td> <td>9</td> <td>3</td> <td>2</td> <td>8</td> </tr> </tbody> </table>	TTh	Th	H	T	O	●●		●	●●●●●	●●●	●●	●●●●●	●	●●●●●	●●●●●	TTh	Th	H	T	O		2	0	1	5	3	+	1	9	1	7	5		3	9	3	2	8	<p>Use column addition, including exchanges.</p> <table style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>TTh</th> <th>Th</th> <th>H</th> <th>T</th> <th>O</th> </tr> </thead> <tbody> <tr> <td></td> <td>1</td> <td>9</td> <td>1</td> <td>7</td> <td>5</td> </tr> <tr> <td>+</td> <td>1</td> <td>8</td> <td>4</td> <td>1</td> <td>7</td> </tr> <tr> <td></td> <td>3</td> <td>7</td> <td>5</td> <td>9</td> <td>2</td> </tr> </tbody> </table>	TTh	Th	H	T	O		1	9	1	7	5	+	1	8	4	1	7		3	7	5	9	2

<p>Adding tenths</p>	<p>Link measure with addition of decimals.</p> <p><i>Two lengths of fencing are 0.6 m and 0.2 m. How long are they when added together?</i></p> <p>Children can use the ten diene to show tenths.</p>	<p>Use a bar model with a number line to add tenths.</p> <p>$0.6 + 0.2 = 0.8$ <i>6 tenths + 2 tenths = 8 tenths</i></p>	<p>Understand the link with adding fractions.</p> $\frac{6}{10} + \frac{2}{10} = \frac{8}{10}$ <p><i>6 tenths + 2 tenths = 8 tenths</i> $0.6 + 0.2 = 0.8$</p>																																																																																																						

Adding decimals using column addition

PV counters and plain counters on a place value grid are the most effective manipulatives when adding decimals with 1, 2 and 3 decimal places.

Ensure children have experienced adding decimals with a variety of decimal places. This includes putting this into context and other measures.

Use place value equipment to represent additions.
 Show $0.23 + 0.45$ using place value counters.
 Children can use PV counters and PV mats for support.

Use place value equipment on a place value grid to represent additions.

Represent exchange where necessary.

O	.	Tth	Hth
		20 20 20 20	30 30
		40 40 40 40	50 50
		20 20 20	

$$\begin{array}{r} 0.23 \\ + 0.45 \\ \hline 1.25 \end{array}$$

Include examples where the numbers of decimal places are different.

O	.	Tth	Hth
500 500 500 500			
		20 20	50 50 50 50
100			

$$\begin{array}{r} 5.00 \\ + 1.25 \\ \hline 6.25 \end{array}$$

Add using a column method, ensuring that children understand the link with place value.

$$\begin{array}{r} 0.23 \\ + 0.45 \\ \hline 0.68 \end{array}$$

Include exchange where required, alongside an understanding of place value.

$$\begin{array}{r} 0.92 \\ + 0.33 \\ \hline 1.25 \end{array}$$

Include additions where the numbers of decimal places are different.

$3.4 + 0.65 = ?$

$$\begin{array}{r} 3.40 \\ + 0.65 \\ \hline \end{array}$$

<p>Year 5 Subtraction</p>

There are 3 groups.</p>	<p>Reason from known facts, based on understanding of unitising. Use knowledge of the inverse relationship to check.</p> <p>$3,000 \div 5 = 600$</p> <p>$3,000 \div 50 = 60$</p> <p>$3,000 \div 500 = 6$</p> <p>$5 \times 600 = 3,000$</p> <p>$50 \times 60 = 3,000$</p> <p>$500 \times 6 = 3,000$</p>

$$1200 \div 400 = 3$$

Dividing up to four digits by a single digit using short division

Children should be encouraged to move away from the concrete and pictorial onto move abstract methods when dividing numbers with multiple exchanges.

Explore grouping using place value equipment.

$$268 \div 2 = ?$$

*There is 1 group of 2 hundreds.
There are 3 groups of 2 tens.
There are 4 groups of 2 ones.*

$$264 \div 2 = 134$$

Children can use PV counter and a PV grid.

Use place value equipment on a place value grid alongside short division. The model uses grouping. A sharing model can also be used, although the model would need adapting.

Lay out the problem as a short division.

*There is 1 group of 4 in 4 tens.
There are 2 groups of 4 in 8 ones.*

Work with divisions that require exchange.

Use short division for up to 4-digit numbers divided by a single digit.

$$\begin{array}{r} 0556 \\ 7 \overline{) 3892} \end{array}$$

$$3,892 \div 7 = 556$$

Use multiplication to check.

$$556 \times 7 = ?$$

$$\begin{aligned} 6 \times 7 &= 42 \\ 50 \times 7 &= 350 \\ 500 \times 7 &= 3500 \end{aligned}$$

$$3,500 + 350 + 42 = 3,892$$

		<p>First, lay out the problem.</p> <p>How many groups of 4 go into 9 tens? 2 groups of 4 tens with 1 ten left over.</p> <p>Exchange the 1 ten left over for 10 ones. We now have 12 ones.</p> <p>How many groups of 4 go into 12 ones? 3 groups of 4 ones.</p>	
<p>Understanding remainders</p> <p>Understand remainders using concrete versions of a problem.</p> <p><i>80 cakes divided into trays of 6.</i></p> <p><i>80 cakes in total. They make 13 groups of 6, with 2 remaining.</i> Children can use PV counters and a PV grid.</p>	<p>Use short division and understand remainders as the last remaining 1s.</p> <p>Lay out the problem as short division.</p> <p>How many groups of 6 go into 8 tens? There is 1 group of 6 tens. There are 2 tens remaining.</p> <p>How many groups of 6 go into 20 ones? There are 3 groups of 6 ones. There are 2 ones remaining.</p>	<p>In problem solving contexts, represent divisions including remainders with a bar model.</p> <p>$683 = 136 \times 5 + 3$ $683 \div 5 = 136 \text{ r } 3$</p>	

<p>Dividing decimals by 10, 100 and 1,000</p>	<p>Understand division by 10 using exchange.</p> <p><i>2 ones are 20 tenths.</i></p> <p><i>20 tenths divided by 10 is 2 tenths.</i></p> <p>Children can move the PV counters or digit cards on a PV grid.</p> 	<p>Represent division using exchange on a place value grid.</p>  <p><i>1.5 is 1 one and 5 tenths.</i> <i>This is equivalent to 10 tenths and 50 hundredths.</i> <i>10 tenths divided by 10 is 1 tenth.</i> <i>50 hundredths divided by 10 is 5 hundredths.</i> <i>1.5 divided by 10 is 1 tenth and 5 hundredths.</i> $1.5 \div 10 = 0.15$</p>	<p>Understand the movement of digits on a place value grid.</p>  <p>$0.85 \div 10 = 0.085$</p> <p>$8.5 \div 100 = 0.085$</p>
<p>Understanding the relationship between fractions and division</p>	<p>Use sharing to explore the link between fractions and division.</p> <p><i>1 whole shared between 3 people.</i> <i>Each person receives one-third.</i></p>  <p>$1 \div 3 = \frac{1}{3}$</p> <p>Children can cut up paper or pizzas etc.</p>	<p>Use a bar model and other fraction representations to show the link between fractions and division.</p>  <p>$1 \div 3 = \frac{1}{3}$</p>	<p>Use the link between division and fractions to calculate divisions.</p> <p>$5 \div 4 = \frac{5}{4} = 1\frac{1}{4}$</p> <p>$11 \div 4 = \frac{11}{4} = 2\frac{3}{4}$</p>

<p>Selecting mental methods for larger numbers where appropriate</p>	<p>Represent 7-digit numbers on a place value grid, and use this to support thinking and mental methods.</p> <p>$2,411,301 + 500,000 = ?$</p> <p><i>This would be 5 more counters in the HTh place.</i></p> <p><i>So, the total is 2,911,301.</i></p> <p>$2,411,301 + 500,000 = 2,911,301$</p>	<p>Use a bar model to support thinking in addition problems.</p> <p>$257,000 + 99,000 = ?$</p> <p><i>I added 100 thousands then subtracted 1 thousand.</i></p> <p>$257 \text{ thousands} + 100 \text{ thousands} = 357 \text{ thousands}$</p> <p>$257,000 + 100,000 = 357,000$ $357,000 - 1,000 = 356,000$</p> <p><i>So, $257,000 + 99,000 = 356,000$</i></p>	<p>Use place value and unitising to support mental calculations with larger numbers.</p> <p>$195,000 + 6,000 = ?$</p> <p>$195 + 5 + 1 = 201$</p> <p><i>195 thousands + 6 thousands = 201 thousands</i></p> <p><i>So, $195,000 + 6,000 = 201,000$</i></p>
<p>Understanding order of operations in calculations</p>	<p>Use equipment to model different interpretations of a calculation with more than one operation. Explore different results.</p> <p>$3 \times 5 - 2 = ?$</p> <p>$3 \times (5 - 2)$ $3 \times 3 = 9$</p> <p>$(3 \times 5) - 2$ $15 - 2 = 13$</p>	<p>Model calculations using a bar model to demonstrate the correct order of operations in multi-step calculations.</p> <p>This can be written as: $16 \times 4 + 16 \times 6$ $64 + 96 = 160$</p>	<p>Understand the correct order of operations in calculations without brackets.</p> <p>Understand how brackets affect the order of operations in a calculation.</p> <p>$4 + 6 \times 16$ $4 + 96 = 100$</p> <p>$(4 + 6) \times 16$ $10 \times 16 = 160$</p>

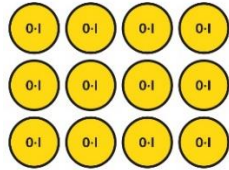

<p>Year 6 Subtraction</p> <p>Comparing and selecting efficient methods</p> <p>At this stage, children should be encouraged to work in the abstract, using the column method to add larger numbers efficiently.</p>	<p>Use counters on a place value grid to represent subtractions of larger numbers.</p> 	<p>Compare subtraction methods alongside place value representations.</p>   $\begin{array}{r} \text{Th} \quad \text{H} \quad \text{T} \quad \text{O} \\ 2 \quad 6 \quad 7 \quad 9 \\ - \quad 5 \quad 3 \quad 4 \\ \hline 2 \quad 1 \quad 4 \quad 5 \end{array}$ <p>Use a bar model to represent calculations, including 'find the difference' with two bars as comparison.</p> 	<p>Compare and select methods. Use column subtraction when mental methods are not efficient. Use two different methods for one calculation as a checking strategy.</p>  <p>Use column subtraction for decimal problems, including in the context of measure.</p> $\begin{array}{r} \text{H} \quad \text{T} \quad \text{O} \quad \cdot \quad \text{Tth} \quad \text{Hth} \\ 3 \quad 0 \quad 9 \quad \cdot \quad 6 \quad 0 \\ - 2 \quad 0 \quad 6 \quad \cdot \quad 4 \quad 0 \\ \hline 1 \quad 0 \quad 3 \quad \cdot \quad 2 \quad 0 \end{array}$
<p>Subtracting mentally with larger numbers</p>		<p>Use a bar model to show how unitising can support mental calculations.</p> <p>$950,000 - 150,000$ That is 950 thousands - 150 thousands</p>  <p>So, the difference is 800 thousands. $950,000 - 150,000 = 800,000$</p>	<p>Subtract efficiently from powers of 10.</p> <p>$10,000 - 500 = ?$</p>

Year 6 Multiplication			
<p>Multiplying up to a 4-digit number by a single digit number</p>	<p>Use equipment to explore multiplications.</p>  <p>4 groups of 2,345</p> <p>This is a multiplication:</p> $4 \times 2,345$ $2,345 \times 4$	<p>Use place value equipment to compare methods.</p> <p>Method 1</p>  <p>Method 2</p> 	<p>Understand area model and short multiplication.</p> <p>Compare and select appropriate methods for specific multiplications.</p> <p>Method 3</p>  $12,000 + 800 + 80 + 20 = 12,900$ <p>Method 4</p> 
<p>Multiplying up to a 4-digit number by a 2-digit number</p>		<p>Use an area model alongside written multiplication.</p> <p>Method 1</p>  	<p>Use compact column multiplication with understanding of place value at all stages.</p> 

<p>Using knowledge of factors and partitions to compare methods for multiplications</p>	<p>Use equipment to understand square numbers and cube numbers.</p>  <p>$5 \times 5 = 5^2 = 25$ $5 \times 5 \times 5 = 5^3 = 25 \times 5 = 125$</p>	<p>Compare methods visually using an area model. Understand that multiple approaches will produce the same answer if completed accurately.</p>  <p>Represent and compare methods using a bar model.</p>	<p>Use a known fact to generate families of related facts.</p>  <p>Use factors to calculate efficiently.</p> $15 \times 16 = 3 \times 5 \times 2 \times 8 = 3 \times 8 \times 2 \times 5 = 24 \times 10 = 240$
<p>Multiplying by 10, 100 and 1,000</p>	<p>Use place value equipment to explore exchange in decimal multiplication.</p>  <p>$0.3 \times 10 = ?$ 0.3 is 3 tenths. 10×3 tenths are 30 tenths. 30 tenths are equivalent to 3 ones.</p>	<p>Understand how the exchange affects decimal numbers on a place value grid.</p>  <p>$0.3 \times 10 = 3$</p>	<p>Use knowledge of multiplying by 10, 100 and 1,000 to multiply by multiples of 10, 100 and 1,000.</p> $8 \times 100 = 800$ $8 \times 300 = 800 \times 3 = 2,400$ $2.5 \times 10 = 25$ $2.5 \times 20 = 2.5 \times 10 \times 2 = 50$

Multiplying decimals

Explore decimal multiplications using place value equipment and in the context of measures.

3 groups of 4 tenths is 12 tenths.
4 groups of 3 tenths is 12 tenths.

$$4 \times 1 \text{ cm} = 4 \text{ cm}$$

$$4 \times 0.3 \text{ cm} = 1.2 \text{ cm}$$

$$4 \times 1.3 = 4 + 1.2 = 5.2 \text{ cm}$$

Represent calculations on a place value grid.

$$3 \times 3 = 9$$

$$3 \times 0.3 = 0.9$$

T	O	•	Tth

Understand the link between multiplying decimals and repeated addition.

T	O	•	Tth

Use known facts to multiply decimals.

$$4 \times 3 = 12$$

$$4 \times 0.3 = 1.2$$

$$4 \times 0.03 = 0.12$$

$$20 \times 5 = 100$$

$$20 \times 0.5 = 10$$

$$20 \times 0.05 = 1$$

Find families of facts from a known multiplication.

I know that $18 \times 4 = 72$.

This can help me work out:

$$1.8 \times 4 = ?$$

$$18 \times 0.4 = ?$$

$$180 \times 0.4 = ?$$

$$18 \times 0.04 = ?$$

Use a place value grid to understand the effects of multiplying decimals.

<p>Dividing by a 2-digit number using long division</p> <p>SHORT DIVISION</p>	<p>Use equipment to build numbers from groups.</p>  <p><i>182 divided into groups of 13. There are 14 groups.</i></p>	<p>Use an area model alongside written division to model the process.</p> $377 \div 13 = ?$  $377 \div 13 = 29$	<p>Use long division where factors are not useful (for example, when dividing by a 2-digit number). Write the required multiples to support the division process.</p> $377 \div 13 = ?$  $0 \times 13 \quad 1 \times 13 \quad 2 \times 13 \quad 3 \times 13 \quad 4 \times 13 \quad 5 \times 13 \quad 6 \times 13 \quad 7 \times 13 \quad 8 \times 13 \quad 9 \times 13 \quad 10 \times 13$ $\begin{array}{r} 13 \overline{) 377} \\ - 130 \\ \hline 247 \\ - 130 \\ \hline 117 \\ - 117 \\ \hline 0 \end{array}$ $377 \div 13 = 29$ <p>A slightly different layout may be used, with the division completed above rather than at the side.</p>

			$\begin{array}{r} 3 \\ 21 \overline{) 798} \\ - 630 \\ \hline 168 \end{array}$ $\begin{array}{r} 38 \\ 21 \overline{) 798} \\ - 630 \\ \hline 168 \\ - 168 \\ \hline 0 \end{array}$ <p>Divisions with a remainder explored in problem-solving contexts.</p>
<p>Dividing by 10, 100 and 1,000</p>	<p>Use place value equipment to explore division as exchange.</p>  <p>Exchange each 0.1 for ten 0.01s. Divide 20 counters by 10.</p> <p><i>0.2 is 2 tenths. 2 tenths is equivalent to 20 hundredths. 20 hundredths divided by 10 is 2 hundredths.</i></p>	<p>Represent division to show the relationship with multiplication. Understand the effect of dividing by 10, 100 and 1,000 on the digits on a place value grid.</p>  <p>$12 \div 10 = 1.2$ $1.2 \times 10 = 12$</p> <p>Understand how to divide using division by 10, 100 and 1,000.</p> <p>$12 \div 20 = ?$</p>  <p>$12 \div 10 = 1.2$ $1.2 \div 2 = 0.6$</p>	<p>Use knowledge of factors to divide by multiples of 10, 100 and 1,000.</p> <p>$40 \div 50 = \square$</p> <p>$40 \rightarrow \div 10 \rightarrow \div 5 \rightarrow ?$</p> <p>$40 \rightarrow \div 5 \rightarrow \div 10 \rightarrow ?$</p> <p>$40 \div 5 = 8$ $8 \div 10 = 0.8$</p> <p>So, $40 \div 50 = 0.8$</p>

<p>Dividing decimals</p>	<p>Use place value equipment to explore division of decimals.</p>  <p><i>8 tenths divided into 4 groups. 2 tenths in each group.</i></p>	<p>Use a bar model to represent divisions.</p>  <p>$4 \times 2 = 8$ $8 \div 4 = 2$ So, $4 \times 0.2 = 0.8$ $0.8 \div 4 = 0.2$</p>	<p>Use short division to divide decimals with up to 2 decimal places.</p> $\begin{array}{r} 0.2 \\ 8 \overline{) 4.24} \\ \underline{8} \\ 0 \\ \underline{0} \\ 0 \\ \underline{0} \\ 0 \end{array}$ $\begin{array}{r} 0.5 \\ 8 \overline{) 4.24} \\ \underline{4} \\ 0 \\ \underline{0} \\ 0 \\ \underline{0} \\ 4 \\ \underline{4} \\ 0 \end{array}$
